Visual LISP is a programming language designed for automation and customization of AutoCAD and other engineering applications. Visual LISP is used to extend AutoCAD by implementing custom functions, visual prompts and macros. Visual LISP is included in all the AutoCAD Professional editions, as well as some of the other editions. Visual LISP uses the following syntax: Automation using Visual LISP is facilitated with a programming interface called Visual LISP Macro Tools, which is a GUI-based scripting tool. The ObjectARX API is used by products that are based on the design of the ObjectARX library, such as the AutoCAD-based products, AutoCAD Electrical, AutoCAD Civil 3D and the more recent AutoCAD Architecture. ObjectARX is a C++ class library. The best known ObjectARX class is called CADDocument, which is the base class for all AutoCAD-based products. A CADDocument object can contain many CADDocumentActions objects. A CADDocumentAction is an action that can be performed in an ObjectARX document. The document actions are grouped into several categories, and these categories are used to name the ObjectARX classes. There are a large number of CADDocumentActions objects that are grouped into categories and subcategories.

Programming with .NET is enabled by using the Visual Studio IDE to develop custom tools or modules that can be used with AutoCAD. .NET programming can be done with Visual Studio or other .NET development environments. The .NET programming language is similar to Visual LISP. AutoCAD was also the first release of software to allow Visual Studio for AutoCAD 2010. This functionality is known as custom AutoCAD control or custom plugin. AutoCAD also offers the ability to script using VBScript. AutoLISP allows writing macros using a traditional LISP-like syntax. VBScript allows writing macros using Visual Basic. These are similar to the CADDocumentAction object with their own CADDocumentActions category. VBScript macros are either embedded in the document or stored in the associated project. VBScript scripting can be used with the Visual Studio IDE or another programming environment. ca3bfb1094
