What's New In?

DefragDrives is a utility which contains the logic of one defragmentation and two consolidation operations (the initial defragmentation and the final consolidation). In addition, it provides a graphical interface to the standard Windows disk defragmentation utility. It's an alternative to the standard Windows interface, which is known to be very clumsy for everyone with a big drive.

Welcome to the community!

···· Compatibility: DefragDrives runs on: · Windows XP ·

Windows Vista · Windows 7 ·

Windows 8 ···· Screenshots:

The non graphical version of DefragDrives is very simple.

There is no need to specify hard drive or partition(s). If you have multiple drives or partitions, the application will

use the standard Windows defragmentation engine: it will

take care of all units and do

them in parallel. You can even

select the initial and final

consolidation operations (if the

option is available) Don't

forget to "defrag" your hard

drive if it is full of fragmented

files. 2. Defrag Drives Free - Disk Defragmenter (Serial) - version 2.0.0.0 Changes: · There is no need to specify hard drive or partition(s) now. · The "small" disk defragmentation option is now a "small" and "normal" consolidation option (the previous defaults were "normal" and "large"). · The "large" disk defragmentation option is now a "normal" and "large" consolidation option (the previous defaults were "large" and "very large"). The GUI version of DefragDrives, which can be started typing "dff" without quotes in Start - Run, is very handy and user

friendly. If you need to defragment multiple hard drives or partitions (maybe doing something else in the meantime) or you want to have a well defragmented hard drive, you can try DefragDrives, an alternative to the standard Windows interface. Click on the button to access the description page: The main screen has two columns: the first one is dedicated to the individual drives of the system, the second one is dedicated to the consolidation and defragmentation operations. A drive is selected in the left column and can be moved with

the mouse (if you move the mouse, the selected item is highlighted in the main column). A "normal" consolidation operation can be performed on this drive, whereas a "large" consolidation operation can be
