Adobe Camera Raw and Lightroom Camera Raw are now included in Photoshop. With Photoshop and Lightroom Camera Raw, Adobe made raw-processing and editing the world's best way to start from or process an image. Recognizing the problem of lacking a camera RAW option in desktop versions of Photoshop, Lightroom, and Elements, Adobe added two features to the Applications for desktop Mac and Windows users. Photoshop and Lightroom Camera Raw opens up raw-based editing to anyone with an unlocked desktop version of Photoshop, Lightroom or Elements. Adobe is the industry leader in integrated RAW photo processing. Adobe Camera Raw and Lightroom Camera Raw offers high-speed, professional, RAW-based editing without a computer knowledge barrier; The two features include the ability to create a complete set of custom adjustments, or quick slider-based adjustments, from a RAW photo. With the release of Photoshop on the web, editors are now able to take their custom edits and quickly apply them in a browser using Photoshop.com on Safari, Chrome or Firefox. In fact, once an editor adjusts a RAW photo in Camera Raw or Lightroom Camera Raw, updates to the modified photo are reflected in the web version of Photoshop. Not only can they take advantage of many additional editing tools in Photoshop, such as advanced masking, erasing and healing tools, but editors can now use any selection tool to create even more complex selections that were previously possible only in Photoshop. To further encourage a more collaborative workflow, they can make these selections directly in the browser.

The new Photoshop 2020 has a cycling view just like the one in Photoshop Elements. We also have the new pre-process image interface to load images quickly in Photoshop. We have the new clipping mask tool to help you work in the image above your file and organize your layers. You can also use the older legacy tools like the eraser and paintbrush tools in Photoshop. With the new tools we can adjust a part of the image or create new masking it. In this way, we can correct and retouch photos quickly and efficiently. And, thanks to tools like Adarrays and insets, we don't need to resize every layer to fit our project. We can also type the object into the clipboard and implement it in the project as an array. So we don't need to resize layers and resize the project every time. It's great to create a flexible, layered workspace for easy navigation. The Clips tool lets you resize and move the image, adjust the line thickness, crop, and retouch it, and merge multiple images to create one image. You can even hide the paths and show an equivalent image. Adobe is excited to announce support for The Pad, a new tablet device platform that makes an iOS-like experience possible on a range of tablets. The launch of The Pad for Photoshop provides users with an enhanced tablet experience that includes multiple pen pressure levels, richer onscreen content, unlimited undo and redo, pinch zoom and in-app image sharing. These features

support the next generation of tools, including Live Image Viewer, which allows users to view the RAW files and 16-bit TIFF files in the browser in addition to the 16-bit color support previously available only when files were opened in the desktop app. Furthermore, the most comprehensive raw support of its kind available today, as well as rich performance improvements and bug fixes, make this release of Photoshop significantly faster and more responsive than previous iterations.

An important new feature of Photoshop CC is the ability for users to sync all the most recently used brushes with their Photoshop account, making it much easier to work on a shared project with colleagues. Additionally, Adobe Sensei, a new AI-powered workspace that specializes in helping Photoshop users quickly clean up, add, and edit images, is available as an optional workspace with Photoshop CC. “With new features and redesigned interfaces, the Photoshop team is offering customers more ways to create and collaborate with their work,” said Margaret Ross, senior product manager, Photoshop. Extensive new content includes a range of completely redesigned workspaces, plus dozens of new brush presets. The new and redesigned filters do more than just transform an image. They can be used on videos, text or 3D models in addition to photos. Finally, the Photo Matching feature in Photoshop CC has been enhanced to identify faces in a photo collection across the organization or even in the cloud with the ability to search and add files from Dropbox, Google Drive and OneDrive by name, not just the location of the files. The annual Photoshop MAX conference is held in Las Vegas, Nevada from October 9-12.
